

SustainABILITY

Inspiring sustainable business for environmental dividends

DISCOVER LEADING ENVIRONMENTAL PRACTICES FROM THE WORLD'S FIRST CERTIFIED CARBON NEUTRAL ZOOS

Businesses have huge potential to create positive and profitable change as the world's environmental agenda increases. Measuring the success of your organisation increasingly means limiting social and environmental impact, and aligning strategies to curb emissions. **SustainABILITY** offers you an up close look at Zoos Victoria's leading environmental processes and management. Guided by expert facilitators with first-hand knowledge of our sustainability practices, we can inspire your organisation reach their sustainability ambitions and assist in the proactive management of your environmental impact.

Showcasing Sustainability

HALF DAY

Explore our zoos sustainability systems and gain insights into the application of specific environmental solutions and management. Led by our technical specialists and experts, these half-day programs invite you to Zoos Victoria to experience our key facilities and understand how it all fits together. The program covers a variety of topics that you can select to suits your business needs:

You can pick and choose from the following half day programs:

- **Waste:** Discover Zoos Victoria's waste management strategies and realise carbon reduction opportunities through these initiatives, such as:
 - Minimising waste to landfill through in-vessel composting of food, manure and horticulture waste.
 - Managing problematic waste, like single-use plastics.
 - Using Environmental, Social and Governance (ESG) procurement to reduce waste and promote a circular economy, and engage with suppliers and partners that align with your organisation's sustainability values.
- **Water:** Explore water management and recycling at Melbourne Zoo, including stormwater harvesting and sustainable horticulture for water efficiency.
- **Energy:** Learn about Zoos Victoria's 100% renewable energy program and its projects such as on-site solar PV, PPA from a wind farm and GreenPower. Understand the overall relationship of carbon reduction through energy efficient projects and energy monitoring to uncover opportunities within your organisation.
- **Carbon Neutral and Net Zero Emissions:** Did you know Zoos Victoria has achieved a 70% carbon reduction? Be inspired by our carbon neutrality strategy and understand how environmental sustainability is interrelated, including emissions inventory measurements and projects for carbon reduction, such as renewable energy, waste reduction and resource efficiency.
- **Environmental Management System:** How did Zoos Victoria become ISO14001 certified? Discover how we have maintained this EMS program to date, as we share our key learnings and insights from our journey.
